

DTEN Smart Framing

Working from Anywhere
Just Got Better

AI-assisted Video Participant Framing Technology

SOLUTION OVERVIEW

Remove the *Remote Feeling* from Remote Work

Inclusion, Engagement, and Equity in the Hybrid Office

While staying connected is at the center of the new hybrid office, combining in-person meetings with remote team members can sometimes leave us feeling excluded.

Remote workers may feel left out, or not really part of the team, while people in the room may feel disconnected from their remote teammates.

DTEN Smart Framing technology divides in-meeting participants into individual video frames, tailoring focus and composition into equal parts so everyone has equal presence in every meeting.

Rely on a simplified, professional meeting experience with DTEN Smart Framing. DTEN All-in-One collaboration solutions use clever AI technology to deliver a professional video meeting experience with life-like video, crystal-clear audio and intuitive touch collaboration.

More Immersive
Meeting Experiences

Equal Presence and
Inclusion

AI Powered

DTEN Smart Framing delivers a more immersive experience for remote participants while improving your ability to engage with in-person meeting attendees by placing each participant in the center of their own frame.

More Immersive Meeting Experiences

- DTEN Smart Framing ensures equal focus for every meeting participant, **regardless of physical proximity to the DTEN smart camera array**
- Each in-person and remote meeting participant is automatically detected by AI camera technology and assigned to their own perfectly composed frame

AI Powered

- Once enabled, DTEN Smart Framing works behind the scenes without requiring any user adjustment or settings
- DTEN Smart Framing will improve over time with updates services through DTEN Orbit Service, DTEN's device management and customer success platform

DTEN Smart Framing Key Benefits

- DTEN Smart Framing technology divides in-meeting participants into individual video frames, tailoring focus and composition into equal parts so everyone has **equal presence and inclusion** in every meeting.
- DTEN Smart Framing lets team members see their colleagues at the center of their own video frame, allowing them to focus on what matters in meetings - *people and content*. As each participant is equally prominent on screen, nuanced facial cues, gestures and body language are more clearly conveyed, resulting in more **natural and immersive conversations**.
- Remote workers will gain a better sense of the **in-room experience** as DTEN Smart Framing AI technology follows in-room participants who leave and enter the room, capturing the flow of people no matter their physical proximity or placement in the meeting room.

DTEN Smart Framing

- Available on DTEN D7 55", 75", Dual 55" and Dual 75"
- Provides more immersive and inclusive meeting experiences
- Employs proprietary AI technology to optimize focus and composition for up to 5 participants
- Dynamically adjusts to frame meeting participants that may be sitting, standing or actively moving about the room
- Works behind the scenes without requiring any manual adjustment or settings
- DTEN Smart Framing can be enabled through the device dashboard menu

DTEN Smart Framing Compositions:

DTEN Smart Framing supports up to 5 participants, grouped within 3 subframes.

1 Participant in Room

Smart Framing Recognizes Participants
